<sup>1</sup> Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; average for the year obtained by weighing State price averages for the crop-marketing season. Data for earlier years in 1923 Yearbook, table 272.

<sup>1</sup> Year shown is that in which beets were grown. Sugar-making campaign extends into succeeding year.

<sup>2</sup> Including, in some years, a small acreage in Canada used by United States factories.

<sup>3</sup> Includes a small quantity not made from beets, and also that made at the Johnstown, Colo., molasses factory.

<sup>4</sup> Percentages of sucrose (pure sugar) in the total soluble solids of the beets.

<sup>5</sup> Based upon weight of beets sliced, except possibly in a very few factories.

<sup>6</sup> Sucrose actually extracted by factories, including that recovered from beet molasses.

<sup>7</sup> Preliminary.

Bureau of Agricultural Economics; estimates of the Crop Reporting Board. For earlier years see 1934 Yearbook, table 138.

TABLE 141.—*Sugar: Production in continental United States, Hawaii, Puerto Rico and the Philippine Islands, 1909-10 to 1934-35*

| Year beginning July       | Cane (chiefly raw)                         |                        |  |             |                      |                        |            |

<sup>1</sup> Cane sugar, raw, converted to refined basis by multiplying by the following factors up to year 1931-32: United States, 0.932; Puerto Rico, 0.9393; Hawaii, 0.9358; Philippine Islands, 0.95; beginning with 1931-32, United States, 0.9418; Puerto Rico, 0.9460; Hawaii, 0.9617; Philippine Islands, 0.9460.

<sup>2</sup> Figures for 1909-10 to 1923-24 include Louisiana and Texas; beginning 1924-25, Louisiana only.

<sup>3</sup> Unofficial.

<sup>4</sup> Preliminary.

Bureau of Agricultural Economics; production data compiled from the following sources: United States from the Department of Agriculture, except cane sugar, 1909-10 and 1910-11, which are from Willet & Gray; Hawaii from Hawaiian Sugar Planters' Association; Puerto Rico and Philippine Islands from official sources of those islands.

Figures for earlier years appear in previous issues of the Yearbook.

<sup>1</sup> Beet and cane sugar only.<sup>2</sup> Duty free, from Hawaii, Puerto Rico, and the Philippine Islands (Virgin Islands included 1917 and subsequently).<sup>3</sup> No account taken of sugar imported in other forms. Imports from the Philippine Islands excluded, reexports deducted.<sup>4</sup> Shipments to Hawaii and Puerto Rico included. Direct exports to foreign countries from Hawaii and Puerto Rico excluded.<sup>5</sup> Sugar used in the manufacture of other commodities for export on which drawback was paid.<sup>6</sup> No account taken of stocks at the beginning or end of year.<sup>7</sup> Raw sugar converted to refined by multiplying by the following factors: 1909-10 to 1930-31, Cuba and Hawaii, 0.9358; Puerto Rico, 0.9393; Philippines, 0.95; all others (Santo Domingo, British West Indies, Louisiana, etc.), 0.932. Beginning 1931-32, Hawaii, 0.9617; Puerto Rico, Philippines and Virgin Islands, 0.946; Cuba and all others 0.9418. Use reciprocal of above factors to reduce refined sugar to raw.

Bureau of Agricultural Economics. Trade figures from the Bureau of Foreign and Domestic Commerce.

TABLE 145.—*Sugar: Production in specified countries, average 1921-22 to 1925-26, annual 1930-31 to 1934-35*

<sup>1</sup> Preliminary.<sup>2</sup> Unofficial estimate.<sup>3</sup> The figures quoted for India are for the production of gur, a low grade of sugar polarizing between 50° and 60°.<sup>4</sup> Practically the entire crop is consumed within the country.<sup>5</sup> Figures for Java are for the calendar years 1922-25.<sup>6</sup> Unofficial estimate of production of centrifugal sugar, which usually accounts for about 90 percent of the total sugar production.<sup>7</sup> Production in the Philippine Islands is not included in this total, as the figures quoted for the last 4 years are not comparable with earlier years.

Bureau of Agricultural Economics; official sources, International Institute of Agriculture and Sugar Associations estimates except as otherwise stated.

<sup>8</sup> Figures are for the crop years 1921-22 to 1934-35 for the countries in which the sugar-harvesting season begins in the fall months and is completed during the following calendar year, except in certain cane-sugar producing countries in the Southern Hemisphere, such as Argentina, Australia, Mauritius, Union of South Africa, etc., where the season begins in May or June and is completed in the same calendar year. Production in these countries is for the calendar years 1921-34.

<sup>1</sup> Figures are for the crop years 1909-10 to 1934-35 for the countries in which the sugar production season begins in the fall months and is completed during the following calendar year, except in certain cane-sugar-producing countries where the season begins in May or June and is completed in the same calendar year. Production in these countries is for the calendar years 1909-34.

<sup>2</sup> Production of cane and beet sugar in terms of raw sugar.

<sup>3</sup> The figures quoted for India are for the production of gur, a low grade of sugar polarizing between 50° and 60°. Practically the entire crop is consumed within the country.

<sup>4</sup> All grades of sugar reduced to terms of head sugar, a grade of sugar which contains at least 96.5 percent sucrose. Figures for Java are for the calendar years 1910-35.

<sup>5</sup> Figures for 1909-10 to 1917-18 are for pre-war boundaries.

<sup>6</sup> Figures are incomplete through 1920-21; 1914-15 includes Prussian Poland only; 1915-16 to 1919-20 include Prussian Poland and Congress Poland; 1920-21 includes Prussian Poland, Congress Poland, and Galicia.

<sup>7</sup> Figures for 1909-10 to 1913-19 refer to pre-war boundaries; 1914-15 to 1918-19 are exclusively of invaded territory.

<sup>8</sup> Bohemia, Moravia, and Silesia only.

<sup>9</sup> Preliminary.

<sup>10</sup> Unofficial estimate.

Bureau of Agricultural Economics. Estimated world total sugar production for the period 1895-96 to 1908-9 in 1924 Yearbook, table 386.

<sup>1</sup> Beginning with 1919 prices are average prices for crop-marketing season.<sup>2</sup> Compiled from Monthly Summary of Foreign Commerce of the United States, June issues 1919-26 January and June issues, 1927-34, and official records of the Bureau of Foreign and Domestic Commerce.<sup>3</sup> Total exports (domestic exports plus foreign) minus imports. Beginning 1933-34, domestic exports minus imports for consumption. (See introductory text.)<sup>4</sup> Preliminary.

Bureau of Agricultural Economics.

Italic figures are census returns; other acreage, yield, and production figures are estimates of the Crop Reporting Board, revised 1919-28. See introductory text.

TABLE 156.—*Tobacco: Acreage, yield, production, and average price per pound received by producers, by class and type, 1933 and 1934*

| Class and type                             | Type no. | Acreage harvested |                   | Yield per acre |                   | Production       |                   | Price for crop of 1933 |

<sup>1</sup> Acreage and production figures are for the harvesting season. In the Northern Hemisphere, data for 1932-33, for example, are for crops harvested in the summer and fall of 1932; in the Southern Hemisphere they are for crops harvested in the spring of 1933, except in Netherlands India, where the harvest was largely completed in 1932.<sup>2</sup> Calculated from actual acreage and production, except in instances where rounded figures only were available.<sup>3</sup> Preliminary.<sup>4</sup> Unofficial.

See footnotes 1 to 3 on page 453.

<sup>1</sup> Exclusive of North-West Frontier Provinces.<sup>2</sup> Data for European plantations only. In Nyasaland the native production for 1932-33 was 9,132,480 pounds; in the Union of South Africa production on native locations and reserves is estimated at 1,000,000 pounds annually.<sup>3</sup> 1931-32.<sup>4</sup> Exclusive of China. An official estimate of the "average" annual production in 25 of the 28 Provinces, issued in 1932, was 465,000,000 pounds. The production of flue-cured tobacco was estimated at 144,000,000 pounds in 1933-34 and 140,000,000 pounds in 1934-35.

Bureau of Agricultural Economics; compiled from official sources, International Institute of Agriculture and reports of United States consuls, commercial attachés, agricultural attachés, and commodity specialists in foreign countries, except as otherwise stated.

<sup>1</sup> Production and price data, 1919-29, revised May 1932.<sup>2</sup> Stocks as of July 1 and disappearance beginning July 1.<sup>3</sup> Calculated by converting stemmed to unstemmed and storage weight to green, or farmers' sales weight, by allowing for normal losses of moisture and stem.<sup>4</sup> Type 22.<sup>5</sup> Type 23.<sup>6</sup> Stocks as of Jan. 1 of year following production, and disappearance beginning Jan. 1 of year following production.<sup>7</sup> Previous to 1929 tobacco stocks reports included Pennsylvania and New York. Pennsylvania is believed to refer entirely to type 41. New York is believed to include type 53 produced both in New York and Pennsylvania.<sup>8</sup> Type 45.<sup>9</sup> Type 62.<sup>10</sup> Includes primed Havana seed, which has not been reported separately since 1929.<sup>11</sup> Type 54.<sup>12</sup> Type 55.<sup>13</sup> Includes Eastern Ohio and Perique. For years 1920-24 Round Tip also included. The stocks for earlier years probably include some other tobacco not reported separately as to type.<sup>14</sup> Tobacco stock classification changed in 1929, increasing miscellaneous stocks, so that 1928 disappearance cannot be made comparable.<sup>15</sup> Less than 50,000 pounds.

Bureau of Agricultural Economics; stocks prior to 1929 compiled from reports of the Bureau of the Census.

<sup>1</sup> The quantities given are unstemmed equivalent of all kinds of tobacco used. Stemmed leaf and scraps, etc., used in manufacturing have been converted to unstemmed equivalent at the ratio of 3 pounds stemmed to 4 pounds unstemmed; in respect to leaf used in the manufacture of tobacco and snuff, prior to 1928 no conversion factor was used but in this table all figures are compiled on the conversion basis named.

Bureau of Internal Revenue, Treasury Department.

<sup>1</sup> Included in "Total crop." By commercial crop is meant that portion of the total crop which is sold for consumption as fresh fruit.

<sup>2</sup> Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26; January and June issues, 1927-34; and official records of the Bureau of Foreign and Domestic Commerce.

<sup>3</sup> Dried and canned are converted to terms of fresh apples on following bases: 1 pound of dried is equivalent to about 5 pounds fresh; 1 pound of canned is equivalent to about 2 pounds fresh; 48 pounds fresh equal 1 bushel. No reexports reported.

<sup>4</sup> Total exports (domestic plus foreign) minus imports. Beginning 1933-34 domestic exports minus imports for consumption. (See introductory text.)

<sup>5</sup> Includes 6,724,000 bushels in 1928 and 220,000 bushels in 1932 not harvested on account of market conditions. Prices and value are computed on the harvested crop.

<sup>6</sup> Preliminary.

<sup>7</sup> December forecast of total shipments from 1934 crop.

Bureau of Agricultural Economics; production figures are estimates of the Crop Reporting Board, revised. See introductory text. Italic figures are census returns. Prices to producers are based upon returns from crop reporters.

TABLE 170.—*Apples: Production and weighted average price per bushel received by producers, by States, average 1927-31, and annual 1933 and 1934*

<sup>1</sup> Preliminary.

Bureau of Agricultural Economics. Based upon returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; average for the year obtained by weighting State price averages for the crop-marketing season. Data for earlier years in 1928 Yearbook, table 133. Only monthly prices are comparable.

<sup>1</sup> Foreign weights are converted to bushels on the basis of 48 pounds per bushel; domestic, 1 barrel equals 3 boxes (or bushels).

<sup>2</sup> Preliminary.

<sup>3</sup> Year ended June 30.

<sup>4</sup> Includes pears.

<sup>5</sup> 4-year average.

<sup>6</sup> Includes pears and quinces.

Bureau of Agricultural Economics; official sources.

<sup>1</sup> Crop-movement season covers 17 months, from December through the second following April; i. e., the 1923 season begins December 1922 and ends April 1924. Figures for certain States include shipments for month preceding or following the regular crop-movement season.

<sup>2</sup> Preliminary.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in car lots include those by boat reduced to car-lot basis. Shipments by truck not included.

<sup>1</sup> Including undetermined quantities used for canning in some States.<sup>2</sup> Bushels containing approximately 50 pounds.<sup>3</sup> Includes some quantities not harvested on account of market conditions: 300,000 bushels in 1929; 44,000 in 1930; 1,634,000 in 1931; and 375,000 in 1932. Price refers to harvested portion of crop.<sup>4</sup> A average price for late States is computed only to Dec. 1.

Bureau of Agricultural Economics; estimates based on returns from crop reporters.

<sup>1</sup> Crop-movement season covers 21 months, beginning in October of the previous year in such early shipping States as California, Louisiana, and Texas, and extending through June of the following year, i. e., the 1923 season begins in October 1922, and ends in June 1924, in order to include shipments from storage in Northern States and to have season comparable with acreage and production.

<sup>2</sup> Preliminary.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in car lots include those by boat reduced to car-lot basis. Shipments by truck not included.

<sup>1</sup> Two-thirds size (New York) crates, containing approximately 90 pounds.

<sup>2</sup> Includes some quantities not harvested on account of market conditions: 249,000 crates in 1932, and 197,000 in 1933. Price refers to harvested portion of crop.

<sup>3</sup> Average price for late States computed only to Dec. 1.

Bureau of Agricultural Economics; estimates based on returns from crop reporters.

<sup>1</sup> Estimates include only certain States where total production can be calculated from commercial sales (shipments, canning, cold pack, etc.) and differ from previously published commercial estimates for some States by an increased allowance for farm and local use.

<sup>2</sup> Preliminary.

<sup>3</sup> Includes some quantities not harvested on account of prices as follows: New York, 1931, 2, 550 tons; California, 1931, 3, 000 tons, 1933, 500 tons. Prices and value are computed on the harvested crop.

<sup>4</sup> 3-year average.

Bureau of Agricultural Economics; estimates of the Crop Reporting Board. Estimates of production for 1929-33 revised on basis of 1930 census. Earlier years not so revised.

<sup>1</sup> Estimates of production include fruit consumed on farms, sold locally, and used for manufacturing purposes, as well as that shipped. Fruit ripened on the trees but destroyed by freezing or storms prior to picking is not included. The estimates cover the crop produced from the bloom of the year shown. In California, where picking continues throughout the year, the estimates are for 12-month periods beginning Nov. 1. In other States the season begins about Sept. 1.

<sup>2</sup> Includes tangerines.

<sup>3</sup> Season average prices, 1919-33; season average price to Dec. 1, 1934. California prices are for naked fruit at the packing-house door; Florida prices are for packed boxes minus selling charges on the commercial crop so handled and bulk prices for other commercial and noncommercial marketings; Florida lime prices, 1919-23, are Dec. 1 prices.

<sup>4</sup> From prospects on Apr. 1, 1935, commercial shipments of Florida citrus fruits from the 1934 crop were estimated at 14,000,000 boxes of oranges and 7,500,000 boxes of grapefruit compared with 16,500,000 boxes of oranges and 7,500,000 boxes of grapefruit shipped from the 1933 crop. Commercial estimates and forecasts represent out-of-State shipment, whether by rail, boat, or auto truck.

<sup>5</sup> For years 1919-34, equivalent in standard boxes, each equal to about 2 of the "half straps" commonly used.

<sup>6</sup> Census. Size of boxes not specified.

<sup>7</sup> 500 boxes or less.

<sup>8</sup> Includes 977,000 boxes of oranges for charity which are excluded in computing value.

<sup>9</sup> As estimated from prospects on Apr. 1, 1935, except for lemons and limes which are based on Dec. 1 prospects.

Bureau of Agricultural Economics; production figures are estimates of the Crop Reporting Board, revised 1919-28. See introductory text.

<sup>1</sup> Year beginning July; reports of Bureau of Foreign and Domestic Commerce.<sup>2</sup> Cases on basis of 24 No. 2 cans.

## Bureau of Agricultural Economics.

Figures on the Florida pack of canned grapefruit were obtained as follows: 1921-22 to 1927-28, averages of various trade estimates; 1928-29, estimated by the Florida Grapefruit Cannery Association; 1929-30 to 1933-34, complete surveys made by the Bureau of Foreign and Domestic Commerce. A box of fresh fruit in Florida is estimated to pack slightly more than a case of canned fruit.

Some grapefruit also is canned in Texas, Arizona, and California. In 1932-33 Arizona packed 700 cases of grapefruit hearts and 3,200 cases of juice. In 1933-34 the Arizona pack was 570 cases of hearts and 5,900 cases of juice, besides 68,000 gallons of juice in barrels, equivalent to 20,000 cases of 24 No. 2 cans.

Considerable quantities are exported from the United States; domestic exports for the fiscal year 1933-34 were 31,888,086 pounds or the equivalent of 1,063,270 cases. Puerto Rico also ships to foreign countries.

<sup>1</sup> Where months are missing, average is for months shown.<sup>2</sup> Includes averages in other months as follows: New York, 1928-29, \$2.29 in August 1929; 1930-31, \$2.61 in September 1930; 1932-33, \$3.69 in August 1933; 1933-34, \$2.46 in September 1933.

Bureau of Agricultural Economics.

Compiled as follows: Chicago, October 1925-September 1927 from Bulletins 22 and 23, issued by Bureau of Railway Economics; October 1927-Oct. 12, 1929, average computed from unchecked records of Bureau of Railway Economics; beginning Oct. 14, 1929, from Chicago Fruit and Vegetable Reporter. New York, reports of California Fruit Growers Exchange. Prices weighted by number of boxes sold. These prices are a new series and are not comparable with those published in Yearbooks prior to 1930.

<sup>1</sup> Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1920-26; January and June issues, 1927-34.<sup>2</sup> Total exports (domestic plus foreign) minus total imports. Beginning 1933-34 domestic exports minus imports for consumption. (See introductory text.)<sup>3</sup> Net import equals total imports minus total exports (domestic plus foreign).<sup>4</sup> January-June 1922; reported in value only prior this date.<sup>5</sup> Includes some quantities not harvested on account of market conditions as follows: 100,000 tons in 1922; 138,000 in 1925; 15,000 in 1926; 142,000 in 1927; 153,000 in 1928; 433,000 in 1930, including 316,000 tons sold but left on the vines; 10,000 in 1931; 154,000 in 1932; and 3,000 in 1933. Price and value are based on the quantities actually harvested, plus a quantity of fruit that was sold but left on the vines in 1930.<sup>6</sup> Less than 0.05 percent.<sup>7</sup> Preliminary.

Bureau of Agricultural Economics; production figures are estimates of the Crop Reporting Board, revised. Prices are based upon returns from crop reporters.

<sup>1</sup> Crop-movement season covers 15 months, from October of the previous year through December of the given year, i. e., 1923 season begins in October 1922 and extends through December 1923.

<sup>2</sup> Preliminary.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in car lots include those by boat reduced to car-lot basis. Shipments by truck not included.

TABLE 218.—*Lettuce, commercial crop: Acreage, production, and season average price per crate received by producers, by States; average 1928-32, annual 1933 and 1934*

| Group and State           | Acreage            |                |                | Production                          |                                     |                                     | Price for crop of— |                |                |

<sup>1</sup> Western crates containing approximately 75 pounds (mostly packed 4 to 6 dozen heads per crate).<sup>2</sup> Season begins in fall of the previous year.<sup>3</sup> Includes some quantities not harvested on account of market conditions: California, Imperial, 300,000 crates in 1934; Colorado, 389,000 crates in 1932; Oregon, late crop, 10,000 crates in 1932; Washington, intermediate crop, 86,000 crates in 1932 and 95,000 in 1933, and late crop, 15,000 in 1932. Price refers to harvested portion of crop.

Bureau of Agricultural Economics; estimates based on returns from crop reporters.

| 1934 <sup>7</sup> ..... | <sup>6</sup> 45,404 | .80                | 34,770                          |  |              |                     |                         |                          |

<sup>1</sup> Dried peaches converted to terms of fresh on the basis that dried peaches equal 19 percent of fresh. Canned peaches converted to terms of fresh on the basis that 24 pounds of fresh equal 1 dozen cans of 1 pound each; 48 pounds of fresh equals 1 bushel. In practice, 1 bushel of fresh fruit is figured as the equivalent of 2 dozen cans of 1 pound each. No reexports reported.

<sup>2</sup> From 1919 to 1922, Sept. 15 price; 1923-25, Sept. 15 price in North, Aug. 15 price in South; 1926-34, average price for the crop-marketing season.

<sup>3</sup> Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26, January and June issues, 1927-34.

<sup>4</sup> Canned peaches were reported in value only, prior to July 1, 1922.

<sup>5</sup> No exports reported prior to Jan. 1, 1922; figures for 1921 represent exports Jan. 1, 1922, to June 30, 1922.

<sup>6</sup> Includes some quantities not harvested on account of market conditions as follows: 1,297,000 bushels in 1926; 2,709,000 in 1927; 3,842,000 in 1928; 10,639,000 in 1930, including 6,180,000 sold but left on the trees; 8,063,000 in 1931, including 3,938,000 sold but left on the trees; 6,710,000 in 1932; 3,647,000 in 1933, including 1,480,000 sold but left on the trees, and 2,208,000 in 1934. Values are based on the quantity actually harvested plus a quantity of fruit that was sold but left on the trees in 1930, 1931, and 1933.

<sup>7</sup> Preliminary.

Bureau of Agricultural Economics; production figures are estimates of the Crop Reporting Board, revised. Italian figures are census returns. Prices based upon returns from crop reporters.

<sup>1</sup> From 1919 to 1925, Nov. 15 price; 1926-34, average price for the crop-marketing season.

<sup>2</sup> Canned pears converted to terms of fresh on the basis that 1 pound canned fruit is equivalent to 2 pounds fresh; dried pears converted to terms of fresh on the basis that dried pears equal 25 percent of fresh; 48 pounds fresh equals 1 bushel. No imports of pears reported. Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1923-26, January and June issues, 1927-34.

<sup>3</sup> Exports were reported in value only prior to July 1, 1922.

<sup>4</sup> Includes some quantities not harvested on account of market conditions as follows: 42,000 bushels in 1927; 62,000 in 1928; 1,292,000 in 1930; 625,000 in 1931; 2,666,000 in 1932; 1,667,000 in 1933, and 375,000 in 1934. Prices and value are computed on the harvested crop.

<sup>5</sup> January-June 1929. Not previously reported.

<sup>6</sup> Preliminary.

Bureau of Agricultural Economics; production figures are estimates of the Crop Reporting Board, revised. Italic figures are census returns. Prices are based upon returns from crop reporters.

<sup>1</sup> Crop movement season covers 12 months, from June of one year through May of the following year. Figures for California for 1930-31, 1931-32, and 1932-33 include shipments in month preceding and following the regular crop-movement season.<sup>2</sup> Preliminary.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in car lots include those by boat reduced to car-lot basis. Shipments by truck not included.

<sup>1</sup> Preliminary.<sup>2</sup> Includes some quantities not harvested on account of market conditions as follows: Plums, California, 7,000 tons in 1931 and 7,000 in 1933; prunes, dried, California, 13,000 tons in 1930; Oregon, 8,000 tons in 1930. Prices and value are computed on the harvested crop.<sup>3</sup> Plums.<sup>4</sup> To convert California estimates to fresh-fruit basis, multiply by 2½. In the other States, the ratio ranges from 3 to 4 fresh to 1 dried.

Bureau of Agricultural Economics; estimates of the Crop Reporting Board.

<sup>1</sup> Beginning with 1919 prices are weighted average prices for crop-marketing season.

<sup>2</sup> Compiled from Producers Price Current. Prices in 1919 are averages of the high and low weekly quotations of New York potatoes, October-June, converted from dollars per 180 pounds to cents per bushel; beginning 1920, season September-May.

<sup>3</sup> Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1919-28, January and June issues, 1927-34, and official records of the Bureau of Foreign and Domestic Commerce.

<sup>4</sup> The difference between total exports (domestic exports plus reexports) and total imports; beginning 1933-34 domestic exports minus imports for consumption. (See introductory text.) + indicates net exports and - indicates net imports.

<sup>5</sup> Preliminary.

Bureau of Agricultural Economics.

Acreage, yield, and production figures are estimates of the Crop Reporting Board, revised, 1919-28. See introductory text. Italic figures are census returns. Prices received by producers are based upon returns from crop reporters.

<sup>1</sup> Preliminary.<sup>2</sup> 4-year average.

Bureau of Agricultural Economics. Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere are combined with those of the Southern Hemisphere which immediately follow; thus, for 1933-34 the crop harvested in the Northern Hemisphere countries in 1933 is combined with the Southern Hemisphere harvest which begins late in 1933 and ends early in 1934.

TABLE 242.—Potatoes: Production of certified seed, by States, average 1925-34, annual 1925-34

<sup>1</sup> Crop-movement season covers 10 months, from December through the second following June; i. e., the 1924 season begins in December 1923 and ends June 1925.

<sup>2</sup> Preliminary beginning January 1934.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in car lots include those by boat reduced to car-lot basis, 400 to 700 bushels to a car-load. Shipments by truck not included.

TABLE 245.—Potatoes: Average price per bushel received by producers, United States, 1925-26 to 1934-35

<sup>1</sup> Preliminary

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; average for the year obtained by weighting State price averages for the crop-marketing season. Data for earlier years in 1928 Yearbook, table 210. Only monthly prices are comparable.

<sup>1</sup> Less than 10 quotations.

<sup>2</sup> Street sales.

<sup>3</sup> Less-than-car-lot sales to jobbers.

Bureau of Agricultural Economics.

Compiled from daily market reports from Bureau representatives in the markets. Average prices as shown are based on stock of U. S. No. 1 grade; they are simple averages of daily change of selling prices. In some cases conversions were made from larger to smaller units, or vice versa, in order to obtain comparability. Prices do not include Russet Burbanks.

In this table the potato season begins in January of one year and extends through June of the next year. Thus the \$7.19 in May 1920 on first line is the price of the last of old-crop potatoes, and the \$6.03 in May 1920 on second line is the price of early or new-crop potatoes that month.

TABLE 247.—*Potatoes, Idaho, Russet Burbanks: Average car-lot price per 100 pounds to jobbers at Chicago, 1924-25 to 1934-35*

<sup>1</sup> Crop-movement season covers 12 months, from July of one year through June of the following year. Figures for certain States include shipments for month preceding or following the regular crop-movement season.

<sup>2</sup> Preliminary.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in car lots include those by boat reduced to car-lot basis. Shipments by truck not included.

<sup>1</sup> Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; average for the year obtained by weighting State price averages for the crop-marketing season. Data for earlier years in 1928 Yearbook, table 221. Only monthly prices are comparable.

<sup>1</sup> Kiln-dried.

Bureau of Agricultural Economics; compiled from daily market reports from Bureau representatives in the markets.

Average prices as shown are based on stock of good merchantable quality and condition; they are simple averages of daily range of selling prices. In some cases conversions have been made from larger to smaller units or vice versa, in order to obtain comparability.

TABLE 254.—*Spinach, commercial crop: Acreage, production, and season average price per bushel and per ton received by producers; average 1928-32, annual 1933 and 1934*

<sup>1</sup> Crop-movement season covers 15 months, from October of the preceding year through December of the year shown. Figures for Maryland, Washington, and New Jersey, include shipments in January succeeding the regular crop-movement season.

<sup>2</sup> Preliminary.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in car lots include those by boat reduced to car-lot basis. Shipments by truck not included.

<sup>1</sup> Bushels containing approximately 53 pounds.<sup>2</sup> Short tons.<sup>3</sup> Includes "otherwise prepared."<sup>4</sup> Preliminary.

Bureau of Agricultural Economics; production figures based on returns from crop reporters and canning establishments; imports and exports compiled from Monthly Summary of Foreign Commerce of the United States, June issues. Beginning 1933-34 imports are imports for consumption. See introductory text.

TABLE 259.—*Tomatoes, commercial crop: Acreage, production, and season average price per bushel and per ton received by producers; average 1928-32, annual 1933 and 1934*

1 Includes Casabas, Honey Dews, Honey Balls, Persian melons and mixed melons of these classes.

2 Includes romaine.

3 Includes tangerines and satsumas.

4 Includes fresh prunes.

5 Totals include: 1920-22, 12 markets; 1924-26, 36 markets; 1927-34, 66 markets.

Bureau of Agricultural Economics; compiled from daily reports made by common carriers to Bureau representatives in the various markets. Unloads as shown in car lots include boat receipts reduced to car-lot equivalents but exclude truck and l. c. i. express and freight receipts. This table not comparable with table published in Yearbooks prior to 1934.

## STATISTICS OF MISCELLANEOUS CROPS

TABLE 268.—*Beans, dry, edible:*<sup>1</sup> *Acreage, production, value, and foreign trade, United States, 1919-34*

| Year                    | Acreage harvested | Average yield per acre | Production              | Weighted average price per 100 pounds received by producers <sup>2</sup> | Farm value, basis weighted average price <sup>3</sup> | Whole-sale price per 100 pounds at Chicago <sup>4</sup> | Foreign trade, year beginning July |                               |
|-------------------------|-------------------|------------------------|-------------------------|--|---|---|------------------------------------|-------------------------------|
|                         |                   |                        |                         |  |   |   | Imports <sup>5</sup>               | Domestic exports <sup>6</sup> |
|                         | 1,000 acres       | Pounds                 | 1,000 bags <sup>7</sup> | Dollars  | 1,000 dollars   | Dollars   | 1,000 bushels                      | 1,000 bushels                 |

| 1933.....               | 1,692             | 729.2                  | 12,338                  | 2.79   | 32,465  | 2.97  | <sup>8</sup> 145                   | 116                           |
| 1934 <sup>9</sup> ..... | 1,378             | 737.2                  | 10,159                  | 3.65   | 34,710  | 3.69  |                                    |                               |

<sup>1</sup> Table includes, besides the ordinary edible beans and limas, the Blackeye of California which is identical with the blackeye pea of the South. Soybeans not included.

<sup>2</sup> Price of cleaned beans.

<sup>3</sup> Farm value of dry, edible beans equals the price of cleaned beans applied to the production of cleaned beans rather than total production.

<sup>4</sup> Compiled from Chicago Daily Trade Bulletin, pea beans.

<sup>5</sup> Imports and exports compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26; January and June issues, 1927-34; and official records of the Bureau of Foreign and Domestic Commerce.

<sup>6</sup> Bags of 100 pounds. Computed from bushels of 60 pounds.

<sup>7</sup> Acreage grown alone.

<sup>8</sup> Imports for consumption.

<sup>9</sup> Preliminary.

Bureau of Agricultural Economics.

Italic figures are census returns; census figures include all States; other figures, estimates of Crop Reporting Board, principal producing States only, revised, 1919-28. See introductory text.

Estimates of acreage, yield, production, price to producers, and farm value previous to 1919, as published in Yearbook for 1933 and earlier years, are not comparable with the revised series in this table.

TABLE 269.—*Beans, dry, edible.<sup>1</sup> Acreage, yield, production, and weighted average price per bag of 100 pounds received by producers, by States, averages, and annual 1933 and 1934*

| State              | Acreage harvested   |                |                   | Yield per acre      |        |                   | Production                 |                            |                            | Price for crop of— |                   |

| Other <sup>6</sup> .....       | 368           | 430           | 267           | 340           | 382           | 557           | 701           | 550           | 512           | 675           | 667               |
| Total.....                     | 9,298         | 11,760        | 10,410        | 9,120         | 9,866         | 12,240        | 13,900        | 12,843        | 10,440        | 12,338        | 10,159            |

<sup>1</sup> Table includes, besides the ordinary edible beans and limas, the Blackeye of California, which is identical with the blackeyed pea of the South. Soybeans not included.

<sup>2</sup> The bean classification figures in table 263 of 1932 Yearbook, and similar data in preceding issues, were on a different basis from those in table 258 of 1933 Yearbook, table 269 in 1934 Yearbook, and those in the present table. The present grouping has been made upon a classification basis consistent with the United States standards for beans.

<sup>3</sup> Preliminary.

<sup>4</sup> Special California classes.

<sup>5</sup> Including production of dark red beans in Michigan: 69,000 bags in 1930, 76,000 in 1931, 91,000 in 1932, 70,000 in 1933, and 57,000 in 1934.

<sup>6</sup> Including, in some Western States, seed beans of garden varieties.

Bureau of Agricultural Economics; based on reports by growers on proportion of total production made up of each variety, supplemented by investigations of field statisticians. Revised, 1919-28. See introductory text.

<sup>1</sup> Crop-movement season extends from September of one year through August of the following year.<sup>2</sup> Preliminary.<sup>3</sup> In addition to rail shipments, 190,267 bags were shipped by river boats or barges.

Bureau of Agricultural Economics; compiled from monthly reports received by the Bureau from local agents of common carriers throughout the country.

Shipments as shown in car lots include those by boat reduced to car-lot basis. Shipments by truck not included. Beginning 1932-33, shipments are reported in bags of 100 pounds each and the data include all shipments originating at shipping points whether in car lots or less than car lots. The figures therefore are not comparable with those in other years, which are for car-lot shipments only.

<sup>1</sup> Solid equivalent of acres from which soybeans were gathered.<sup>2</sup> Excluding soybeans cut for hay. Soybeans planted in corn and soybeans grazed or hogged off are included for the Southern States where they are important, but omitted for Northern States where relatively unimportant.<sup>3</sup> Preliminary.

Bureau of Agricultural Economics; estimates of the Crop Reporting Board.

<sup>1</sup> Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; averages for the year obtained by weighting State price averages for the crop-marketing season. Data for earlier years in 1930 Yearbook, table 298. Only monthly prices are comparable.

<sup>1</sup> Preliminary.<sup>2</sup> These figures are for yellow soybeans, which variety constitutes fully 98 percent of the soybean exports, according to Agricultural Commissioner Paul O. Nyhus.<sup>3</sup> Manchuria not included after June 1932.<sup>4</sup> 3-year average.<sup>5</sup> Imports for consumption.<sup>6</sup> Domestic exports of soybeans are not separately reported in Foreign Commerce and Navigation of the United States; if any, included with exports of "oilseeds." Soybeans inspected for export began in October 1931, there being 7,978,800 pounds exported from October to December; inspected for export calendar year 1932, 253,353,480 pounds and for 1933, 15,831,740 pounds.<sup>7</sup> International Yearbook of Agricultural Statistics.<sup>8</sup> 4-year average.<sup>9</sup> Soybeans included with cake and meal.

Bureau of Agricultural Economics; official sources except where otherwise noted.

<sup>1</sup> Average for months quoted.<sup>2</sup> Domestic oil not quoted prior to October 1929, as production in this country had not reached commercial proportions.

Bureau of Agricultural Economics. Compiled from the Oil, Paint, and Drug Reporter. Prices are average of quotations on Saturdays during the month.

Through August 1911, quotations are for English, spot; September 1911-April 1916, English or Manchuria; May 1916-January 1919, Manchuria only; February 1919, and subsequently, origin not indicated. Quotations for imported do not appear after April 1932 as importations had practically ceased as a result of a prohibitive tariff.

<sup>1</sup> Preliminary.

Bureau of Agricultural Economics; based upon returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; average for the year obtained by weighting State price averages for the crop-marketing season. Data for earlier years in 1928 Yearbook, table 245. Only monthly prices are comparable.

TABLE 282.—*Cowpeas: Acreage, yield, production, and weighted average price per bushel received by producers, by States, average 1927-31, and annual 1933 and 1934*

<sup>1</sup> Solid equivalent of acres from which cowpeas were gathered.<sup>2</sup> Excluding cowpeas cut for hay. Cowpeas planted in corn and cowpeas grazed or hogged off are included for the Southern States where they are important but omitted for the Northern States where relatively unimportant.<sup>3</sup> Preliminary.

Bureau of Agricultural Economics; estimates of the Crop Reporting Board.

<sup>1</sup> For "All hay" average for the year obtained by weighting State price averages for the crop-marketing season.

<sup>2</sup> Preliminary for "All hay" only.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; yearly price obtained by weighting monthly prices by monthly marketings. Data for earlier years in 1928 Yearbook, tables 287-291. Only monthly prices are comparable.

<sup>1</sup> Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1910-26; January and June issues, 1927-34, and official records of the Bureau of Foreign and Domestic Commerce.

<sup>2</sup> Total exports (domestic plus foreign) minus total imports; beginning 1933-34 domestic exports minus imports for consumption. (See introductory text.)

<sup>3</sup> 1920-21 to 1931-32 represent hops used to make cereal beverages containing less than 0.5 percent of alcohol by volume; 1932-33 includes 867,057 pounds of hops used to make cereal beverages containing less than 0.5 percent of alcohol by volume and 6,900,263 pounds fermented malt liquor containing not more than 3.2 percent of alcohol by weight; 1933-34 materials used for fermented liquor.

<sup>4</sup> Not over 600 pounds.

<sup>5</sup> Not including 57,936 pounds in 1924, 71,508 pounds in 1925, 960 pounds in 1926, and 6,294 pounds in 1927 used in the manufacture of distilled spirits.

<sup>6</sup> Average price, crop marketing season.

<sup>7</sup> Net imports.

<sup>8</sup> Preliminary.

Bureau of Agricultural Economics; compiled from reports of the Division of Crop and Livestock Estimates, Bureau of Foreign and Domestic Commerce, records of the Bureau of Internal Revenue, 1910-11 to 1925-26; annual reports of the Commissioner of Prohibition, 1926-27 to 1929-30; and Commissioner of Industrial Alcohol, 1930-31 to date.

<sup>1</sup> Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; average for the year obtained by weighting State price averages for the marketing season. Data for earlier years in 1928 Yearbook, table 303. Only monthly prices are comparable.

TABLE 303.—*Peanuts: Average price per pound to growers, f. o. b. country shipping point basts, by months, 1924-25 to 1933-34*

<sup>1</sup> Preliminary.<sup>2</sup> International Yearbook of Agricultural Statistics.<sup>3</sup> Does not include Manchuria after June 1932.<sup>4</sup> 4-year average.<sup>5</sup> Java and Madura only.

Bureau of Agricultural Economics; official sources except where otherwise noted.

Includes shelled and unshelled, assuming the peanuts to be unshelled unless otherwise stated. When shelled nuts were reported, they have been reduced to terms of unshelled at the ratio of 3 pounds unshelled to 2 pounds of shelled.

<sup>1</sup> Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; average for the year obtained by weighting State price averages for the crop-marketing season. Data for earlier years in 1928 Yearbook, table 334. Only monthly prices are comparable.

<sup>1</sup> Figures for 1900–1919 are tentative revised estimates of the Bureau of Agricultural Economics.

<sup>2</sup> Obtained by subtracting the estimates of "milk cows on farms" shown in table 379 from the estimates of "all cattle on farms" shown in this table.

<sup>3</sup> Data for 1900–1925 are an old series adjusted on basis average relationship between the old and new series for 1926–28. Old series was weighted averages of prices by age groups only and was shown in 1928 Yearbook. The conversion factor was 0.9466 (base is old series). Data for 1926–35 are a new series, referred to above, of average values by age and sex classification, weighted by numbers in each class.

<sup>4</sup> Italic figures are from the census. Census dates were June 1, 1900; Apr. 15, 1910; Jan. 1, 1920 and 1925; Apr. 1, 1930. 1900, 1910, and 1930 include spring-born calves.

<sup>1</sup> Sum of total value of subgroups (classified by age and sex) divided by total number and rounded to nearest dime for States. Division and United States averages not rounded. State figures are new weighted value series, not comparable to State figures previously published for the years prior to 1925.

<sup>2</sup> Preliminary.

Bureau of Agricultural Economics; estimates of the Crop Reporting Board.

TABLE 320.—*Cattle: Number in countries having 150,000 or over, averages 1921-25 and 1926-30, annual 1930-33*

<sup>1</sup> Average for 5-year period if available, otherwise for any year or years within this period except as otherwise stated.

<sup>2</sup> Incomplete.

<sup>3</sup> Average for 1926 estimate for 93 percent of municipalities and the final figures of the Apr. 26, 1930, census. This census is the first complete census of numbers in Mexico and is therefore not strictly comparable with earlier estimates.

<sup>4</sup> Census.

<sup>5</sup> Year 1918.

<sup>6</sup> Unofficial.

<sup>7</sup> Year 1929.

<sup>8</sup> Countries reporting as of December have been considered as of Jan. 1 of following year.

<sup>9</sup> These totals include interpolations for a few countries not reporting each year and rough estimates for some others.

<sup>10</sup> Buffaloes included.

<sup>11</sup> Year 1920.

<sup>12</sup> Census June.

<sup>13</sup> In rural communities only.

<sup>14</sup> Census figures for May 27.

<sup>15</sup> Estimate of total number based on number in rural communities only as compared with preceding year.

<sup>16</sup> November.

<sup>17</sup> Included unofficial estimate of 690,000 buffaloes.

<sup>18</sup> Estimate based on official figures in 1920 for 20 Provinces, which supported 63 percent of the cattle in China in 1914. No data available in 1920 for such important Provinces as Hupeh with 1,898,000 in 1914, Hunan with 2,192,000, Szechuan with 3,006,114, Kwantung with 2,238,000, and Kwangsi with 1,527,000.

<sup>19</sup> Estimate based on official figures in 1932 or 1933 for 22 Provinces, which supported 97 percent of the cattle in China in 1914. The official estimate excluding Turkistan and Inner Mongolia for 1932 or 1933 was 22,363,000. Estimates for this territory and for Manchuria included with China in this table.

<sup>20</sup> Comparable totals for number of countries indicated.

<sup>21</sup> Estimated totals for continents are as follows in millions of head for the 5-year average, 1909-13: North America, Central America, and West Indies, 74.9; South America, 80.3; Europe, excluding Union of Soviet Socialist Republics, 103.3; Africa, 33.8; Asia, excluding Union of Soviet Socialist Republics, 195.3; Oceania, 13.8; world including Union of Soviet Socialist Republics, 562.0.

Bureau of Agricultural Economics; compiled from reports of United States Government representatives abroad, original official sources, and the International Institute of Agriculture unless otherwise stated.

Figures in parentheses interpolated. For later figures for individual countries see Cattle and Beef Issue of Foreign Crops and Markets.

TABLE 321.—*Cattle and calves: Receipts at principal public stockyards and a public stockyards, 1925-34*

Bureau of Agricultural Economics; preliminary estimates of Division of Crop and Livestock Estimates. The figures on income as shown in tables 461 and 462 are computed from the data shown in this table. The difference between gross income and value of production arises from the fact that in computing value of production allowance is made for changes in inventory numbers between the beginning and end of the year, while in computing income these changes are not used.

TABLE 328.—*Cattle and calves: Annual slaughter under Federal inspection, 1907-34, estimated equivalent of Federal inspection, 1900-1906, and estimated total slaughter (including farm) in United States, 1900-1934*<sup>1</sup>

<sup>1</sup> Preliminary.<sup>2</sup> Year ended June 30.<sup>3</sup> The import figures include "canned beef and veal" as taken from reports of the Bureau of Animal Industry.<sup>4</sup> 4-year average.<sup>5</sup> Does not include Manchuria after June 30, 1932.<sup>6</sup> Includes only oleomargarine, tallow, and artificial butter. Meat imports into Italy are not separated as to kinds, although a large quantity of unclassified fresh and frozen meat is undoubtedly beef.

Bureau of Agricultural Economics, official sources.

This table includes fresh, pickled or salted, and canned beef, tallow, oleo oil, oleo stock, oleo stearin, and oleomargarine.

<sup>1</sup> Sum of total value of subgroups (classified by age and sex), divided by total number and rounded to nearest dime for States. Division and United States averages not rounded. State figures are new weighted value series, not comparable to State figures previously published for the years prior to 1925.

<sup>2</sup> Preliminary.

Bureau of Agricultural Economics; estimates of the Crop Reporting Board.

<sup>1</sup> Figures for 1900–1919 are tentative revised estimates of the Bureau of Agricultural Economics.

<sup>2</sup> Data for 1900–1925 are an old series for all hogs as reported, adjusted on basis average relationship between the new and the old series for 1926–28. Old series was shown in 1928 Yearbook. Conversion factor was 1.057 (base was old series). Data for 1926–35 are a new series, referred to above, of average values by age and sex classification weighted by numbers in each class.

<sup>3</sup> Italic figures are from the census. Census dates were June 1, 1900; Apr. 15, 1910; Jan. 1, 1920, and 1925; Apr. 1, 1930. 1900, 1910, and 1930 include spring-born pigs.

| Estimated world total in-<br>cluding Union of Soviet<br>Socialist Republics <sup>22</sup> ..... |                              | 254,800                  | 284,600                  |                          |                          |                          |                          |

<sup>1</sup> Average for 5-year period if available, otherwise for any year or years within that period unless otherwise stated. <sup>2</sup> Number on Jan. 1, 1934, was 57,177,000 head. <sup>3</sup> Incomplete. <sup>4</sup> Census.

<sup>5</sup> These totals include interpolations for a few countries not reporting each year and rough estimates for some others. <sup>6</sup> Year 1929 or nearest year. <sup>7</sup> Year 1920.

<sup>8</sup> Estimates of countries reporting as of December are considered as of Jan. 1, of following year, i.e., the figures for the number of hogs in France as of Dec. 31, 1929, have been placed in 1930 column, etc.

<sup>9</sup> June. <sup>10</sup> Rural communities only. <sup>11</sup> June 20. <sup>12</sup> Unofficial. <sup>13</sup> Apr. 18.

<sup>14</sup> Number on Jan. 1, 1934, was 23,890,000 head.

<sup>15</sup> May.

<sup>16</sup> Number on Jan. 1, 1934, was 3,421,000 head.

<sup>17</sup> November.

<sup>18</sup> Includes French Sudan.

<sup>19</sup> Estimate based on official figures for 1920 for 20 Provinces which supported over 50 percent of the number in China in 1914.

<sup>20</sup> Estimate based on official figures for 1932 or 1933 for 22 Provinces which supported over 99 percent of the number in China in 1914. The official estimate excluding Turkistan and Inner Mongolia in 1932 or 1933 was 94,395,000. Estimates for this territory and for Manchuria included with China in this table.

<sup>21</sup> Comparable totals for number of countries indicated in parenthesis.

<sup>22</sup> Estimated world production for the 5 years 1909-13 was as follows (in thousands of head): North America, Central America, and West Indies, 59,700; South America, 23,500; Europe, excluding Union of Soviet Socialist Republics, 71,800; Africa, 2,500; Asia, excluding Union of Soviet Socialist Republics, 86,200; Oceania, 1,400; world including Union of Soviet Socialist Republics, 266,000.

Bureau of Agricultural Economics; official estimates and International Institute of Agriculture unless otherwise stated.

Figures in parenthesis interpolated. For later figures see the monthly issues of Hog and Pork Prospects and the hog and pork issue of Foreign Crops and Markets.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by number of hogs Jan. 1, to obtain price for the United States; yearly price obtained by weighting monthly prices by Federally-inspected slaughter. Data for earlier years in 1928 Yearbook, table 382. Only monthly prices are comparable.

Bureau of Agricultural Economics. Compiled from reports of packer and shipper purchases; such purchases do not include pigs, boars, stags, extremely rough sows, or cripples. The yearly figures are the simple average of the October to September prices. These weighted prices do not include processing tax. Tax of 50 cents per 100 pounds was imposed from Nov. 5 to Nov. 30, 1933; \$1 from Dec. 1, 1933, to Jan. 31, 1934; \$1.50 from Feb. 1 to Feb. 28; and \$2.25 beginning Mar. 1, 1934.

Data for 1901-24 are available in 1932 Yearbook, table 336.

TABLE 341.—Hogs: Annual slaughter under Federal inspection, 1907-34, estimated equivalent of Federal inspection, 1900-1906, and estimated total slaughter (including farm) in United States, 1900-1934<sup>1</sup>

<sup>1</sup> Purchases under the Agricultural Adjustment Administration.

Bureau of Agricultural Economics; preliminary estimates of Division of Crop and Livestock Estimates. The figures on income as shown in tables 461 and 462 are computed from the data shown in this table. The difference between gross income and value of production arises from the fact that in computing value of production, allowance is made for changes in inventory numbers at the beginning and end of the year, while in computing income these changes are not used.

<sup>1</sup> Lard includes all prime steam, kettle-rendered, neutral, and other pure lards. It does not include lard substitutes nor compounds.

<sup>2</sup> Stocks of meat purchased under the emergency hog-control program by Federal Surplus Relief Corporation are not included in these figures for year 1934.

<sup>3</sup> Pickled pork includes sweet-pickled, plain-brine, and barreled pork.

Bureau of Agricultural Economics. Compiled from reports made by cold-storage establishments. Data for earlier years in 1928 Yearbook, table 390.

<sup>1</sup> Average for 5-year period if available; otherwise, for any year or years within this period except a otherwise stated.

<sup>2</sup> Incomplete.

<sup>3</sup> Census figures.

<sup>4</sup> Year 1929 or nearest year.

<sup>5</sup> These totals include countries with less than 100,000; interpolations for a few countries not reporting each year, and rough estimates for some others.

<sup>6</sup> Unofficial.

<sup>7</sup> Estimates for countries reporting as of Dec. 31 have been considered as of Jan. 1 of following year; i. e., figures for numbers of sheep in France as of Dec. 31, 1929, have been placed in 1930 column, etc.

<sup>8</sup> Census 1920.

<sup>9</sup> June 1930.

<sup>10</sup> In rural communities only.

<sup>11</sup> Years 1921-28 from Livestock Industry in the Soviet Union. Later figures from Pravda, Jan. 28, 1934, and Socialist Agriculture, Nov. 27, 1934. Sheep numbers for 1929-33 estimated from total number of sheep and goats.

<sup>12</sup> Goats included.

<sup>13</sup> Estimate based on change in sheep numbers in June compared with preceding June.

<sup>14</sup> Estimate based on increases in 1920 in 20 Provinces which supported 80 percent of total number in China in 1914.

<sup>15</sup> Estimate based on official estimate for 1932 or 1933 published in the Chinese Economic Bulletin for 22 Provinces which supported 77 percent of total in 1914. The official estimate excluding Turkestan and Inner Mongolia for 1932 or 1933 was 18,935,000. Estimates for this territory and for Manchuria included with China in this table.

<sup>16</sup> Comparable totals for numbers of countries indicated.

<sup>17</sup> Comparable estimated world totals by countries were as follows in millions of head: 1909-13, North America, Central America, and West Indies, 49.6; South America, 93.2; Europe (excluding Union of Soviet Socialist Republics), 134.4; Africa, 71.2; Asia (excluding Union of Soviet Socialist Republics), 115.3; Oceania, 114.7; estimated world total, including Union of Soviet Socialist Republics, 691.6.

Bureau of Agricultural Economics; compiled from official sources and the International Institute of Agriculture unless otherwise stated. Figures in parentheses are interpolated. See wool issue of Foreign Crops and Markets usually published in May, and World Wool Prospects published monthly by the Bureau, for later figures.

Bureau of Agricultural Economics; preliminary estimates of Division of Crop and Livestock Estimates. The figures on income as shown in tables 461 and 462 are computed from the data shown in this table. The difference between value of production and income arises from the fact that in computing value of production, allowance is made for changes in inventory numbers between the beginning and end of the year, while in computing income these changes are not used.

<sup>1</sup> Include fleeces taken at commercial feeding plants. California figures include some fleeces taken from early lambs.

<sup>2</sup> In States where sheep are shorn twice a year, principally Texas and California, this figure covers wool per head of sheep shorn and not weight per fleece.

Bureau of Agricultural Economics: estimates of the Crop Reporting Board.

<sup>1</sup> Preliminary.<sup>2</sup> Estimate of the National Council of Wool Selling Brokers of receipts for first 8 months of season.<sup>3</sup> Estimates based on exports alone or exports, stocks, and domestic consumption and any other available information.<sup>4</sup> Years 1924 to 1926 supplied by the Empire Marketing Board. Years 1927-28 to 1932-33 Official Yearbook of New Zealand 1934 and Monthly Abstract of New Zealand Statistics, August 1934. The estimates of Dalgety & Co. used formerly are as follows in millions of pounds, with scoured wool included at its scoured weight: Average 1926-30, 235.6; 1929, 241.8; 1930, 265.7; 1931, 265.5; 1932, 265.5; 1933, 262.7.<sup>5</sup> Estimates based on sheep numbers at date nearest shearing and other available data.<sup>6</sup> Estimates of the Buenos Aires branch of the First National Bank of Boston, based on exports, stocks, and domestic consumption except that production for 1931 and 1932 have been revised upward provisionally to take care of excess exports in 1932-33.<sup>7</sup> Preliminary estimate. Reports of increase range from 5 to 15 percent.<sup>8</sup> Estimates of C. O. Taylor, formerly United States agricultural attaché in South Africa.<sup>9</sup> Published as reported by pulleries and is mostly washed. The Bureau of the Census considers 1 pound of pulled wool the equivalent of 1½ pounds of grease.<sup>10</sup> Estimates of the Imperial Economic Committee (formerly Empire Marketing Board).<sup>11</sup> Revisions based on recent census figures of wool production or of sheep numbers.<sup>12</sup> Estimates for Asiatic countries rough approximations only.

(Footnotes continued on p. 589)

TABLE 365—*Wool: Estimated production in specified countries, average 1926-30, annual 1929-34—Continued*

## Footnotes—Continued

<sup>13</sup> Provisional estimate based on prospects of a 15 to 20 percent reduction in 1934, due to losses of sheep in Roumelia and Anatolia.

<sup>14</sup> Totals subject to revision. Few countries publish official estimates of wool production. In the absence of official figures for many countries various estimates have been used. Some have been furnished by United States Government representatives abroad and others have been based on reports of sheep numbers, average fleece weights, and any other available data. For some principal exporting countries the figures are seasonal exports alone, or estimates derived from exports, carry-over, and domestic consumption. In the case of most Asiatic countries the figures are rough commercial estimates.

<sup>15</sup> Estimate based on production in 34 countries as compared with 1932.

<sup>16</sup> Estimate based on sheep numbers and average yield as derived from official estimates for recent years. The Union of Soviet Socialist Republics program called for 353,000,000 pounds in 1931 according to the Economic Handbook of the Soviet Union, but this estimate appears much too large considering the decrease in sheep numbers since 1929.

<sup>17</sup> Unofficial estimate based on sheep numbers in 1932. Owing to poor marketing conditions in recent years exports of sheep's wool not reliable index of production.

## Bureau of Agricultural Economics.

This table includes wool shorn during the calendar year in the Northern Hemisphere and that shorn during the season beginning July 1 or Oct. 1 of the given calendar year in the Southern Hemisphere, the bulk being shorn during the last 6 months of the given calendar year. Pulled wool is included in the total for most important countries at its grease equivalent. Figures in parentheses are interpolated or carried forward. See Foreign Crops and Markets annual wool review in May or June 1934 for table showing all countries and monthly World Wool Prospects for current revisions.

<sup>1</sup> Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by number of sheep, Jan. 1, to obtain a price for the United States. Average for the year obtained by weighting State price averages for the calendar year. Data for earlier years in 1928 Yearbook, table 422. Only monthly prices are comparable.

Bureau of Agriculture Economics. These data were obtained from prices given by Kreglinger &amp; Farnau for the opening and closing of each series of the London wool sales. For months when no sales were held the figures are interpolations of nearest actual prices. Conversions at monthly average rate of exchange as given in Federal Reserve Bulletins to December 1925, and October 1931 to December 1934; others at par.

<sup>1</sup> Prior to 1900, estimates for each 10-year period represent an index of annual changes applied to the census as a base on first report after census data were available. Figures for 1900 to 1919 are tentatively revised estimates of the Bureau of Agricultural Economics for numbers on Jan. 1. Figures from 1920 to 1931 are revised estimates made in 1932, based upon study of 1930 census report. Figures for 1900-1935 relate to "cows and heifers 2 years old and over Jan. 1, kept for milk."

<sup>2</sup> Values for 1880-99 relate to "milk cows." Data for 1900-1925 are an old series of values of "milk cows" adjusted to relate to "milk cows and heifers, 2 years old and over" on basis of relationship between the 2 series from 1926 to 1928. Conversion factor was 0.955 (base is old series). Data for 1926-35 are values relating to "milk cows and heifers 2 years old and over."

and 1930, "number of cows milked in 1924 and 1929." Census dates were June 1 from 1880 to 1900; Apr. 15, 1910; Jan. 1, 1920 and 1925; Apr. 1, 1930.

<sup>4</sup> Preliminary.

Bureau of Agricultural Economics; estimates of the Crop Reporting Board.

TABLE 380.—*Milk cows, heifers, and heifer calves: Number on farms, by States, Jan. 1, 1933-35*

| State and division      | Cows and heifers, 2 years old and over, kept for milk |                 |                   |                |              |                   | Heifers 1 to 2 years old being kept for milk cows |                 |                   | Heifer calves under 1 year being kept for milk cows |                 |                   |

¹ Modified accredited counties are those in which tuberculosis does not exist among more than 0.5 percent of the cattle, as determined by official tuberculin testing, and from which all reactors to the test have been removed.

² The figures in these columns represent net increases at the close of each year.

³ Represents decrease from figures for previous year.

Bureau of Animal Industry.

Current data on tuberculosis-eradication work, including progress by States and counties, may be obtained from Bureau of Animal Industry. Data for earlier years in 1928 Yearbook, table 448.

TABLE 387.—*Milk cows and production of milk: Estimated number of producing cows, yield per cow, and production of milk by States, 1932-34*

| State and division      | Milk cows on farms <sup>1</sup> |                |                   | Milk production per cow <sup>2</sup> |        |                   | Total production of milk on farms <sup>2</sup> |                   |                   |

<sup>1</sup> Estimated average number of milk cows on farms during 1934. The estimates exclude heifers not yet fresh but include some cows which had calves running with them much of the year.

<sup>2</sup> These estimates exclude milk sucked by calves, milk spilled or lost up to the time it is measured, skimmed, or delivered by farmers, and milk produced by cows not on farms.

<sup>3</sup> Approximations based chiefly on the population in small towns and rural areas where most families purchase their milk supply directly from local farmers. Estimates include milk equivalent of cream.

<sup>4</sup> Estimates include milk delivered to creameries, condensaries, cheese factories, and market-milk receiving stations, but exclude market milk sold to other farmers for local retail delivery.

<sup>5</sup> As computed by counties.

Bureau of Agricultural Economics; estimates of Division of Crop and Livestock Estimates.

TABLE 389.—*Dairy products: Annual per capita consumption in the United States, 1924-33*

| Year      | Butter <sup>1</sup> | Cheese <sup>2</sup> | Evaporated milk <sup>3</sup> | Condensed milk <sup>3</sup> | Milk used in cities and villages <sup>4</sup> | Milk equivalent, all products <sup>5</sup> |

<sup>1</sup> Includes both farm- and factory-made butter. These estimates include some butter used in other products such as ice cream. <sup>2</sup> Includes all kinds of cheese except cottage, pot, and bakers.

<sup>3</sup> Includes some condensed and evaporated milk used in other products, also includes both whole- and skim-milk product.

<sup>4</sup> Milk and milk equivalent of cream consumed per capita by that part of the population not on rural farms. These estimates include some milk and cream used in such products as ice cream and supersede estimates previously issued.

<sup>5</sup> Based on estimates of milk production on farms and elsewhere, with milk fed to calves deducted in calculating per capita consumption.

Bureau of Agricultural Economics.

Consumption of butter, cheese, evaporated milk, condensed milk, and milk equivalent of all dairy products is calculated from production, foreign trade, and domestic stocks. Milk used in cities and villages is calculated from board of health reports.

TABLE 390.—*Dairy products: Quantity manufactured, 1926-33*

| Product  | 1926         | 1927         | 1928         | 1929         | 1930         | 1931             | 1932             | 1933             |

| Dried or powdered buttermilk.....                          | 31,378       | 38,435       | 45,502       | 54,215       | 64,801       | 50,535           | 48,712           | 53,260           |
| Powdered whole milk.....                                   | 10,768       | 11,464       | 9,605        | 13,202       | 15,440       | 12,627           | 11,983           | 13,026           |
| Powdered skimmed milk.....                                 | 91,718       | 118,123      | 147,990      | 207,579      | 260,675      | 261,938          | 270,194          | 288,114          |
| Powdered cream.....  | 331          | 338          | 673          | 294          | 490          | 161              | 80               | 154              |
| Dried casein (skim milk or buttermilk product).....        | 16,953       | 18,033       | 22,151       | 30,537       | 41,965       | 35,335           | 24,428           | 24,087           |
| Malted milk.....   | 20,673       | 22,116       | 21,128       | 22,850       | 22,691       | 18,197           | 13,215           | 12,430           |
| Milk sugar (crude).....                                    | 4,476        | 4,077        | 5,323        | 8,965        | 12,779       | 9,562            | -----            | -----            |
| Ice cream of all kinds (gallons) <sup>3</sup> .....        | 215,248      | 228,756      | 232,185      | 254,618      | 240,750      | 208,239          | 154,604          | 148,913          |

<sup>1</sup> Included in creamery butter.

<sup>2</sup> Unsweetened condensed milk (plain condensed) was classified as "Evaporated milk (unsweetened), bulk goods", in previous years. <sup>3</sup> Production in commercial ice-cream factories only.

Bureau of Agricultural Economics, compiled from reports of factories made direct to the Bureau.

Figures beginning with the year 1929 are the most complete since these reports were inaugurated in 1918. Some allowance, therefore, should be made for this when comparing production since 1929 with that of previous years.

TABLE 391.—*Dairy products: Quantity manufactured, by months, 1933*

| Product   | Jan.             | Feb.             | Mar.             | Apr.             | May              | June             | July             | Aug.             | Sept.            | Oct.             | Nov.             | Dec.             | Total            |
|---|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|
| <i>1,000 lb.</i>  | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> | <i>1,000 lb.</i> |
| Creamery butter <sup>1</sup> .....  | 130,245          | 123,322          | 133,248          | 136,306          | 191,068          | 201,960          | 176,820          | 106,662          | 140,088          | 180,464          | 115,215          | 116,384          | 1,702,688        |
| Renovated or process butter.....  | 124              | 77               | 72               | 80               | 90               | 71               | 126              | 94               | 68               | 88               | 83               | 108              | 1,079            |
| American cheese:  |                  |                  |                  |                  |                  |                  |                  |                  |                  |                  |                  |                  |                  |
| Whole milk.....   | 24,877           | 23,808           | 28,571           | 32,356           | 43,664           | 54,653           | 48,206           | 42,857           | 35,620           | 20,804           | 21,010           | 23,179           | 408,631          |

Bureau of Agricultural Economics. Quotations include some purchases other than for the manufacture of butter. Based on reports of special price reporters. Monthly prices, by States, weighted by number of milk cows Jan. 1, to obtain a price for the United States; yearly price obtained by weighting State yearly average by estimated volume sold, 1929-34. Data for earlier years in 1928 Yearbook, table 465. Only monthly prices are comparable.

Bureau of Agricultural Economics. Compiled from reports of factories made direct to the Bureau. Figures beginning with the year 1929 are the most complete since these reports were inaugurated in 1918. Some allowance, therefore, should be made for this when comparing production since 1929 with that of previous years. Data for earlier years in 1928 Yearbook, table 461.

TABLE 401.—*Creamery butter<sup>1</sup> production in factories, by States, average 1927-31, annual 1932 and 1933*

Bureau of Agricultural Economics. Compiled from reports of Bureau representatives in the markets. These wholesale prices are based on open-market sales for cash or short-time credit, consideration being given to the prices at which the larger quantities are sold. New York data for earlier years in 1930 Year-book, table 461.

Bureau of Agricultural Economics. Compiled from Danish Butter Journal (Smør Tidende) official quotations in kroner per 100 kilograms, as fixed each Thursday by 2 committees, representing dairy and commercial interests respectively. For years 1882-1924, see the 1923 Yearbook, table 450, and 1928 Yearbook, table 467. Converted at monthly average rates of exchange as given in Federal Reserve Bulletin, except for period January 1927-August 1931, when par of exchange was used.

Bureau of Agricultural Economics. Compiled from reports of factories made direct to the Bureau. Figures beginning with the year 1929 are the most complete since these reports were inaugurated in 1918. Some allowance, therefore, should be made for this when comparing production since 1929 with that of previous years. Data for earlier years in 1928 Yearbook, table 468.

<sup>1</sup> Quantities given are net weight.<sup>2</sup> The term "American cheese" is intended to cover only those varieties known as "twins," "flats," "daisies," "Cheddars," "longhorns," and "square prints." It does not, therefore, include all kinds of cheese made in the United States.

Bureau of Agricultural Economics; compiled from reports made by cold-storage establishments.

Changes in these tables made due to transference of current trading stocks to cold-storage stocks from Jan. 1, 1927, to Dec. 1, 1931. Data for earlier years in 1928 Yearbook, table 472.

<sup>1</sup> 30-dozen cases.

<sup>2</sup> Quantities given are net weight. 35 pounds of frozen eggs are approximately equivalent to 1 case of 30 dozen shell eggs.

Bureau of Agricultural Economics; compiled from reports made by cold-storage establishments. Data for earlier years in 1928 Yearbook, tables 488 and 493.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by Census production 1919 to obtain the United States averages from 1925 through May 1932, and by 1929 census sales thereafter. Yearly prices obtained by weighting annual State averages by sales in each State. Data for earlier years in 1928 Yearbook, table 492.
